1. Version History

Version	Description
1.0	Initial Release

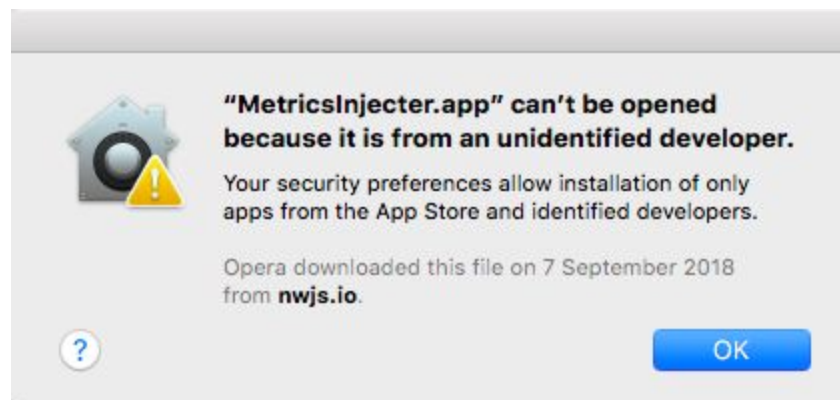

2. Description

This Mac tool injects fake data in your Lightning Communities dashboards. As a result, the following reports from the "Service Community Scorecard" will be populated:

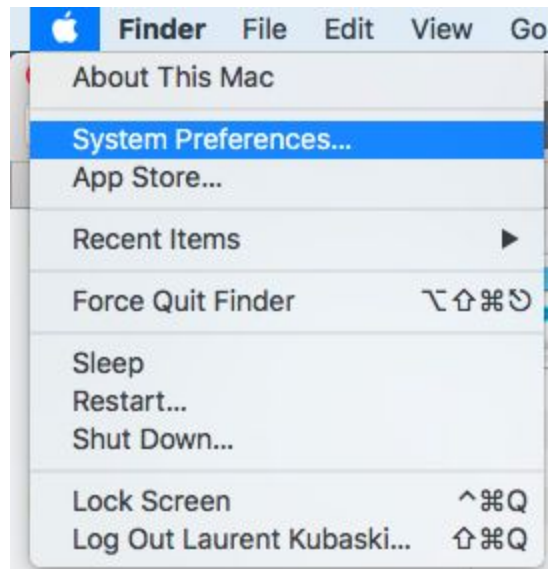

- Daily Active Users
- New Members (Weekly)
- Questions (Weekly)
- Searches With No Results

3. Launching the tool

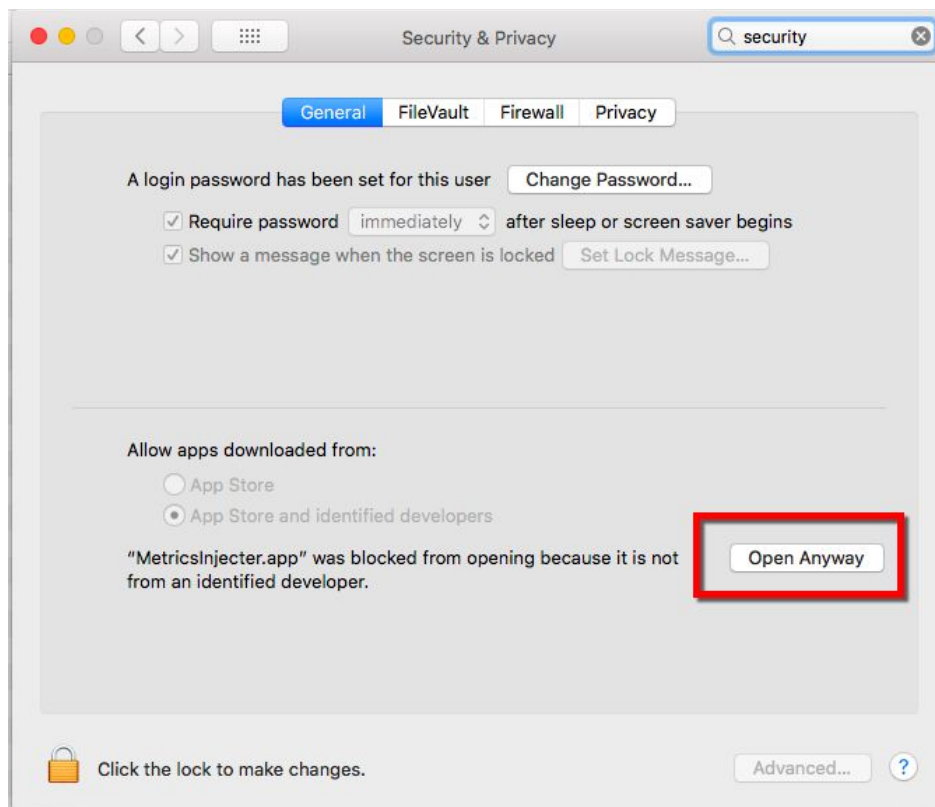

Double click on "MetricsInjector.app" to run the tool. The first you do that, you'll see a warning since the app has not been signed:

To fix this, open System Preferences:

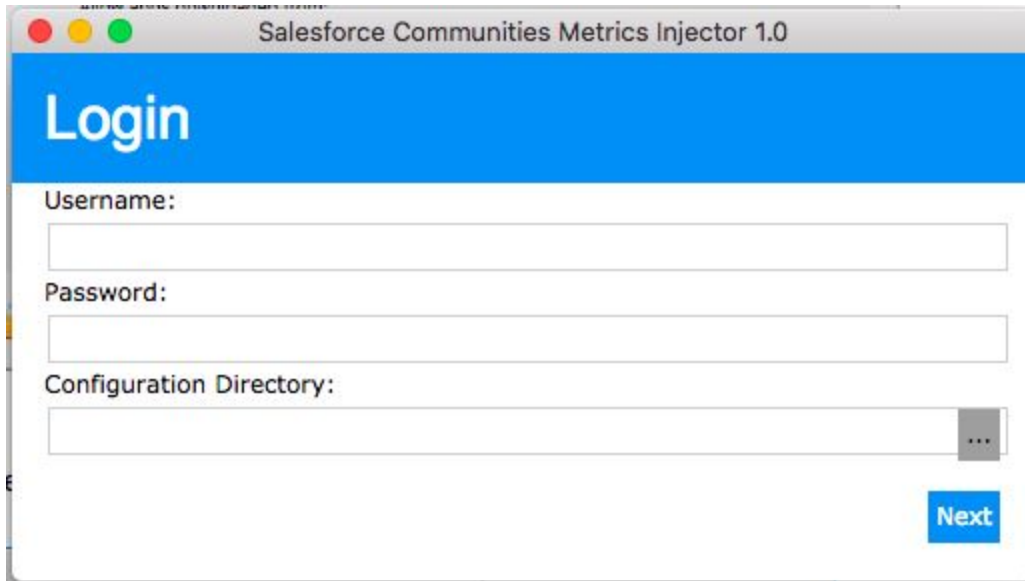

Then go to the "Security & Privacy" section and click on the "Open Anyway" button:

4. Using the tool

On the login screen, enter the following information:

- Org admin username
- Org admin password
- Configuration Directory path (click on the "..." button and select the "config" directory that is in the same directory as the tool).

The screenshot shows a macOS-style window titled "Salesforce Communities Metrics Injector 1.0". The window has a blue header bar with the word "Login" in white. Below the header, there are three input fields: "Username:", "Password:", and "Configuration Directory:". The "Configuration Directory:" field has a small grey button with three dots (a file selector icon) to its right. At the bottom right of the form area, there is a blue button labeled "Next".
